

Empathy Map

Empathy Map — PocketSmart AI

User Needs

Users need a simple way to plan spending for home purchases, parties and jewelry while keeping the plan within a stated budget.

User Goals

- Enter a budget and a small set of requirements.
- Receive practical recommendations.
- See estimated costs and shopping links.
- Revisit previous recommendations through history.

User Pain Points

- Planning can require multiple websites or tabs.
- Manual comparison of items and costs can take time.
- Jewelry planning may depend on matching an outfit or occasion.
- Users need the recommendations organized around their budget.

What the Product Provides

PocketSmart AI combines three planners, AI-generated recommendations, optional outfit-image analysis for jewelry planning, shopping links, and recommendation history.

Evidence Used

This map is derived from the project's documented problem statement, requirements, planner flows and demo script; it is a project-design summary rather than user-interview data.
