

No. of Functional Features Included in the Project

Functional Features Included in the Project

The submitted PocketSmart AI implementation includes these main functional feature groups:

User registration and login.

JWT-based authentication and logout.

Home budget planner.

Party budget planner.

Jewelry budget planner.

Optional outfit image upload and AI analysis for jewelry planning.

AI-generated recommendations with shopping links.

Dashboard and recommendation history.

Supporting Functions

- Input validation with Pydantic.
- Protected routes.
- Token blacklist on logout.
- Static file handling for uploaded images.
- FastAPI automatic documentation through /docs.

This count groups related functions into user-facing feature areas; it is not a claim that there are only eight individual functions in the source code.
